

1. Open the playground: <https://killercoda.com/playgrounds/scenario/ubuntu>

2. Run the Airflow container:

```
docker run -d -p 8080:8080 --name airflow apache/airflow standalone
```

3. Check whether the container is running:

```
docker ps
```

4. View the logs to get the Airflow username and password:

```
docker logs airflow
```

5. In the logs, search for lines similar to:

Standalone mode

Login with username: admin

Password: xxxxx

6. On the right side of Killercoda, click the hamburger menu (≡).

7. Click **Traffic / Ports**.

8. Open port **8080**.

9. Airflow UI will open in the browser.

10. Login using:

- Username: admin
- Password: the password shown in docker logs airflow output.
